Technical Information

EHT Generator Boards

The Programmable Focus Unit on the VG9000 contains five identical PCB's for the generation of high voltages. These use purpose built transformers, not generally available.

MassCare can now supply a direct equivalent of this PCB that can be used to replace any failed board.

You may wish to consider purchasing one or more of these PCB's to keep in reserve in case of future failure.

The part number is MC-B-05279, and price is available on request.

Please contact MassCare for further information
